EXPERTISE REPORT PERFORMED ON WATER FILTER « TIVAWATER »
N° OCC/DIRNOKI/03/2015

The effectiveness of TIVAWATER sand filter was performed on analysis of water samples taken from wells in Kindu, rain water and Lake Kivu water in Goma city.

Qualitative analysis of samples were performed in Goma's OCC laboratory before and after passing through the sand filter.

The results obtained after filtering show a real retention of the organic impurities and microorganisms observed.

The filter sand TIVAWATER improves organoleptic, physical, chemical and microbiological water beverage.

Its effectiveness is observed on reducing microorganism contamination including coliforms, salmonella and others.
